Sent

Product Design Document · v1.0

Relationships, remembered. Sent.

sentapp.net · Confidential

---

1. Product Vision

Sent is an AI-powered occasion intelligence platform that ensures you never miss a moment — and never send a generic one. We aggregate life occasions from every social platform, research what is going on in that person's life right now, and generate a deeply personalized message in your voice, delivered automatically on time through the right channel.

Sent is not a birthday reminder app. It is a personal media studio for every relationship moment — birthdays, graduations, new babies, promotions, retirements, condolences, and every occasion in between. Text, photos, GIFs, memes, video, and voice — all delivered in your voice, automatically.

> *Think of it as the 'Her' movie — but birthday cards instead of letters, and without the existential crisis.*

2. The Problem

The gap between caring about people and actually showing it is enormous. Life is full of moments worth celebrating — birthdays, graduations, new babies, promotions, retirements — and we consistently fumble them. Existing tools are either too generic, too manual, or too narrow to handle the full range of human occasions.

- Generic messages get scrolled past. Nobody feels seen.
- Life gets busy. Important people slip through. The silence says more than words.
- Birthday data is scattered across Facebook, LinkedIn, Google Contacts, and iCloud with no unified source of truth.
- Even when people remember, they lack the creative tools to make the message feel truly personal.

✦ *Birthdays. Graduations. New babies. Promotions. Retirements. Every person you love has moments worth celebrating — and they remember who showed up.*

3. The Solution — Four-Step Pipeline

Step 1 — Aggregate

Sent pulls life occasions — birthdays, work anniversaries, graduations, new babies, and milestones — from every major social network and calendar using OAuth-based integrations. No scraping, no terms of service violations — the user grants access to their own data.

- Facebook, LinkedIn, Google Contacts, iCloud, Outlook
- Unified birthday feed with deduplication
- Smart conflict resolution when platforms show different dates

Step 2 — Research

Before each upcoming occasion, Sent scans the recipient's recent public activity to build a real-time context dossier — what is going on in their life right now, not six months ago.

- Recent posts, job changes, life events, relocations
- Shared interests and conversation history
- Relationship context from the sender's perspective

Step 3 — Generate

Sent generates a deeply personalized message in the sender's chosen voice archetype — one of five distinct personality styles. The message references the recipient's actual life and sounds like the sender, not a template.

- Five voice archetypes: The Nurturer, The Wit, The Sage, The Hype, The Minimalist
- AI learns the sender's actual writing style over time (voice fingerprint)
- Full media suite: text, photos, GIFs, memes, video, voice notes, digital postcards — for any occasion

Step 4 — Deliver

Sent delivers the message through the right channel at the right time — for any occasion, automatically, while the sender sleeps.

- Channels: text/SMS, email, LinkedIn, Instagram, WhatsApp
- Scheduling: exact time delivery, time zone aware
- Read receipts and delivery confirmation where available

4. Full Media Suite

Sent goes beyond text to become a complete personal media studio for relationships. Every media type is enhanced by AI suggestion and delivered through the Sent postcard frame.

4.1 Text Messages

The core feature. AI-generated, personalized, voice-matched. Delivered via SMS, email, LinkedIn, Instagram, or WhatsApp.

4.2 Photo Uploads

Users can attach personal photos to any message — a throwback from a shared trip, a screenshot of an old conversation, a photo from last year's birthday. This transforms a message into a memory.

- Free tier: up to 3 photos per message
- Sent+: up to 10 photos per message
- Sent Pro: unlimited photos
- AI photo suggestion: Sent surfaces relevant photos from the user's camera roll based on the recipient

4.3 GIFs & Memes

Visual language is how people actually communicate in 2026. GIFs and memes make every voice archetype more expressive and more authentic. The Hype personality needs a perfectly timed reaction GIF. The Wit lives for the right meme.

- Powered by Giphy and Tenor APIs
- Free tier: 1 GIF or meme per message
- Sent+/Pro: unlimited
- AI suggestion engine: contextually relevant GIFs and memes based on the recipient's life context and the sender's voice archetype

✦ *The AI suggestion engine is a defensible moat — it learns what visual language resonates with each sender over time. Nobody else has this data.*

4.4 Video Messages

Video is intimacy. A 15-second video message hits completely differently than any text. Nobody forgets a video message — especially from someone they care about.

Tier	Video Length	Notes
Free	Up to 15 seconds	Short and punchy — enough for a genuine moment
Sent+	Up to 60 seconds	Room for a real message
Sent Pro	Up to 3 minutes	Full keepsake-quality video

- AI video script suggestion: Sent drafts what to say based on recipient context
- Auto-captions for accessibility
- Delivery via MMS, email attachment, or direct platform DM

4.5 Voice Notes

A short audio clip in the sender's actual voice, AI-scripted and delivered as a voice note. The most intimate format — hearing someone's voice on your birthday is unforgettable.

- Sent Pro exclusive feature
- AI drafts the script, sender records in one take
- Delivered as audio message via SMS, WhatsApp, or email

4.6 Digital Postcard Builder

The premium creative feature that ties the entire media suite together. Users upload a photo or video thumbnail, and Sent frames it as a vintage-style digital postcard — complete with the Sent stamp logo in the corner and the message appearing as handwritten-style text on the back.

- Sent+ and Pro exclusive
- Postcard is shareable as an image — recipients screenshot and share
- Every postcard is branded with the Sent stamp mark — organic marketing that money cannot buy
- Keepsake quality — people save these

✦ *This is the organic growth engine. When someone receives a Sent postcard and shares it, everyone who sees it asks 'how did they make that?' That is the acquisition funnel.*

4.7 Sent Gift — Digital Cash Gifts

Remember the birthday card your uncle slipped a $20 bill into? Sent Gift is that — but digital, instant, and built right into the message. No Venmo link. No 'I'll send it later.' The gift is part of the message itself.

- Preset amounts: $5, $10, $20, $50, $100 — or custom amount
- Embedded directly in the Sent message or postcard as a tap-to-claim button
- Recipients claim via email, phone number, Apple Pay, Google Pay, or bank transfer
- Powered by Stripe — the most developer-friendly, battle-tested payments infrastructure available
- Sent takes a small processing fee per transaction — a revenue stream entirely separate from subscriptions
- Works across all delivery channels: text, email, Instagram DM, LinkedIn, WhatsApp

✦ *This is not just a feature — it is a new revenue model. At scale, transaction fees compound independently of subscription growth. It also dramatically expands the use case: graduations, new babies, weddings, condolences, 'just because.' Sent is no longer a birthday app. It is how people express care with money attached.*

Tier	Gift Limit per Transaction	Monthly Send Limit	Processing Fee
Free	Up to $25	$50/month	2.9% + $0.30 (Stripe standard)
Sent+	Up to $100	$500/month	2.4% + $0.30 (reduced rate)
Sent Pro	Up to $500	Unlimited	1.9% + $0.30 (best rate)

5. Voice Archetypes

Users choose one of five personality archetypes that governs how Sent writes their messages. Over time the AI learns the sender's actual writing style and creates a unique voice fingerprint.

Archetype	Personality	Example Style
The Nurturer	Warm, expressive, big-hearted	Full of affection, exclamation points, genuine emotion. Feels like a warm hug.
The Wit	Dry humor, sharp, playful	Clever callbacks, gentle roasting, charming without trying too hard.
The Sage	Thoughtful, genuine, grounded	No fluff. Says something real. The message you actually think about later.
The Hype	Energetic, enthusiastic, loud	ALL CAPS ENERGY. GIFs. Celebration. Turn it up.
The Minimalist	Short, clean, no fluff	Six words that mean more than six paragraphs.

Voice fingerprinting is a long-term data moat. The more a user sends through Sent, the more precisely the AI understands their individual communication style. This model belongs to the user and cannot be replicated by a competitor.

6. Pricing & Tier Structure

Feature	Free	Sent+ $4.99/mo	Sent Pro $12.99/mo
Contacts	Up to 10	Unlimited	Unlimited
Messages per month	3	Unlimited	Unlimited
Auto social data pull	Manual only	✓	✓
Delivery channels	Text + Email	All channels	All channels

Feature	Free	Sent+ $4.99/mo	Sent Pro $12.99/mo
Photos per message	Up to 3	Up to 10	Unlimited
AI photo suggestions	—	✓	✓
GIFs & Memes	1 per message	Unlimited	Unlimited
AI GIF/meme suggestions	Basic	Full	Full
Video messages	Up to 15 sec	Up to 60 sec	Up to 3 min
Voice notes	—	—	✓
Digital postcard builder	—	✓	✓
Voice fingerprinting	Archetype only	Archetype + learning	Full fingerprint
Analytics dashboard	—	—	✓
CRM sync (Salesforce)	—	—	✓
Team / business use	—	—	✓
Sent Gift — cash gifts	Up to $25 / $50mo	Up to $100 / $500mo	Up to $500 / Unlimited
Gift transaction fee	2.9% + $0.30	2.4% + $0.30	1.9% + $0.30

7. Competitive Moat

Data Flywheel

Every message sent, rated, and refined trains the model on what 'good' looks like per relationship type and voice archetype. The product gets measurably better with use. A competitor starting today cannot replicate two years of behavioral data.

Voice Fingerprint

Over time Sent learns the sender's actual writing style — not just an archetype. This model is the user's and stays with them. It is the most personal AI any consumer product has ever built.

Network Effect

When both sides of a relationship use Sent, shared context creates a closed feedback loop no competitor can replicate. The product understands the relationship, not just the individuals.

API & Integration Moat

Deep OAuth integrations with every major social platform are costly to build, maintain, and negotiate. This is a genuine barrier to entry for any new entrant.

Media Intelligence

The GIF, meme, and video suggestion engine learns what visual language resonates between specific senders and recipients. This behavioral data — who sends what kind of content to whom, and what lands — is unique and deeply valuable.

Payments Infrastructure

Sent Gift creates a financial relationship between Sent and its users that goes far beyond a subscription. Once someone sends money through Sent, the switching cost becomes real — their gift history, recipient payment info, and trusted transfer relationships all live in the platform. Payments are the deepest possible form of retention.

8. Ad Creative Platform

Two campaign concepts are locked and ready for production.

Concept 1 — The Question

Format: 20-30 seconds. Pre-roll, Instagram, TikTok. No product demo needed — pure emotional contrast.

> *When's the last time a birthday message actually made you smile?*

- Montage of people opening generic birthday messages. Polite smiles, quick thumbs up, scrolling on.
- One person opens a Sent message. Reads it. Actually laughs. Shows their partner. Genuine reaction.
- End card: Relationships, remembered. Sent.

✦ *The tagline answers the opening question. When someone actually remembered you — that is when it made you smile.*

Concept 2 — The Grandson (HERO SPOT)

Format: 30-45 seconds. The flagship campaign spot. Intergenerational, deeply human. Converts on quiet self-recognition.

- Office setting. Small cluster of coworkers gathered around someone's phone — laughing, passing it around.
- A co-worker walking by slows down. Peeks over someone's shoulder.
- FIRST PERSON POV — we see a Sent message on screen through their eyes.

> *...geez. I just sent a plain ol' happy birthday text to my grandson last week. I bet he would've loved this.*

- Inner monologue — quiet, honest, not performed. Feels like a real thought, not a pitch.
- Co-worker pulls out their phone. Opens Sent.
- End card: 'When's the last time a birthday message actually made you smile?' Relationships, remembered. Sent.

✦ *The co-worker IS the audience. Grandparents are an enormous untapped market — they care deeply, feel guilty about not doing more, and are underserved by every existing tool.*

9. Market Opportunity

Sent competes in and disrupts multiple markets simultaneously.

Market	Size	How Sent Disrupts
Social + personal relationship mgmt	$28B TAM	Replaces generic reminders with genuine intelligence
Greeting cards (Hallmark, etc.)	$7.5B	Digital-first keepsake quality at zero marginal cost
Gifting + greetings (1-800-Flowers, Hallmark, etc.)	$23.5B	Emotion delivery without physical logistics — every occasion
Digital peer-to-peer gifting (Venmo, CashApp)	$12B+	Sent Gift embeds cash inside the message — no separate app needed
Consumer AI apps	Rapidly expanding	First mover in personal relationship AI

- TAM: $28B — social and personal relationship management
- SAM: $4.2B — consumers using 3+ social platforms who pay for productivity tools
- SOM: $380M — Year 3 target, premium subscribers in US and UK

10. Product Roadmap

Phase	Timeline	Milestones
Phase 1 — Foundation	Months 1-2	Working prototype live. Occasion intelligence concept + brand locked. Seed round open.
Phase 2 — Integrations	Months 2-4	OAuth integrations: Facebook, LinkedIn, Google Contacts. GIF/Tenor API. Beta waitlist.
Phase 3 — Beta	Months 4-6	500 beta users. Voice fingerprinting v1. Photo uploads. Feedback loop.
Phase 4 — Launch	Month 8	Public App Store launch. Freemium monetization live. Video messages.
Phase 5 — Scale	Months 9-12	Postcard builder. Voice notes. CRM integrations. Series A prep.
Phase 6 — Sent Gift	Month 12+	Stripe integration live. Cash gift embedded in messages. Transaction revenue stream active.

11. Long-Term Vision — Sent as the Relationship Layer

The roadmap above gets Sent to Series A. What follows is not a distraction from that goal — it is the reason the goal is worth pursuing. This section exists to show where the oculus opens.

The Insight

Every major messaging platform — iMessage, WhatsApp, Telegram — was built around utility. Speed, delivery, presence. They answer the question: did the message get there?

Nobody has built a platform around meaning. Nobody has asked: did the message matter?

Sent answers that question. And once people experience messages that actually matter — messages that remember, that reference, that feel personal — the bar for every other message permanently shifts.

The Wedge Strategy

Sent enters through the back door. Not 'replace iMessage' — that is a feature war nobody wins. Instead:

- Phase 1-6: Build the occasion intelligence platform. Establish trust. Get people opening Sent regularly because it is where meaningful messages live.
- Phase 7: Introduce Sent Threads — ongoing conversations that live around a shared relationship. The graduation message becomes a thread. The birthday message becomes a thread. The postcard becomes the start of something.
- Phase 8: Sent becomes the place for conversations that actually matter. Not 'what do you want for dinner' — but the messages people save, screenshot, and remember years later.

✦ *The natural evolution: 'Text me on Sent later and we'll hook up after the show.' That sentence represents a fundamental shift — from a tool people use occasionally to a platform people live in. That is a Series B or C story. But the seed of it is planted here, today, in the occasion intelligence layer.*

Why This Is Defensible

iMessage wins on utility because Apple controls the hardware. WhatsApp wins on network effects because a billion people already use it. Sent wins on something neither can replicate: it knows your relationships.

By the time Sent Threads launches, the platform will have years of occasion data, voice fingerprints, media preferences, gift history, and relationship context for every connection in a user's life. That is not a feature. That is a moat that compounds every single day.

The Vision in One Sentence

> *Sent is not a messaging app that remembers occasions. It is a relationship platform that happens to send messages.*

What This Means for Investors Today

The pre-seed round funds the occasion intelligence platform — a focused, defensible, revenue-generating product with a clear path to Series A. The long-term vision is not a distraction from that. It is the reason the moats are worth building.

Every data point collected at the occasion layer becomes infrastructure for the relationship layer. Nothing built in Phase 1-6 is throwaway. Every line of code compounds.

✦ *Investors who see the full arc will understand why the valuation at Series A looks the way it does. The occasion app is the business. The relationship platform is the category.*
